

Troubleshooting Hydraulic Systems

THS

Questions to consider when troubleshooting hydraulic systems...

- What does the system “do” when it’s working properly?
- Can you define the problem clearly?
- Are we looking at a flow-related or pressure-related issue?
- When did the problem originate?
- Has anyone changed a component recently?
- What is the condition of the primary pump?
- Could this be fluid-related?
- What could occur within an involved controlling component that could cause the issue?
- What assistance does our logbook of system problems offer?
